

`Model = myModel(#)`
`model.step()`

number of Agents.

Run the step method in the myModel class.

Data collection and Batch running

↑
Save and Store variable values each model execution.

`mesa.datacollection`

- DataCollector
(class)

↓
`PANDAS DF`

→ Analysis.

↖
Analyse all results.

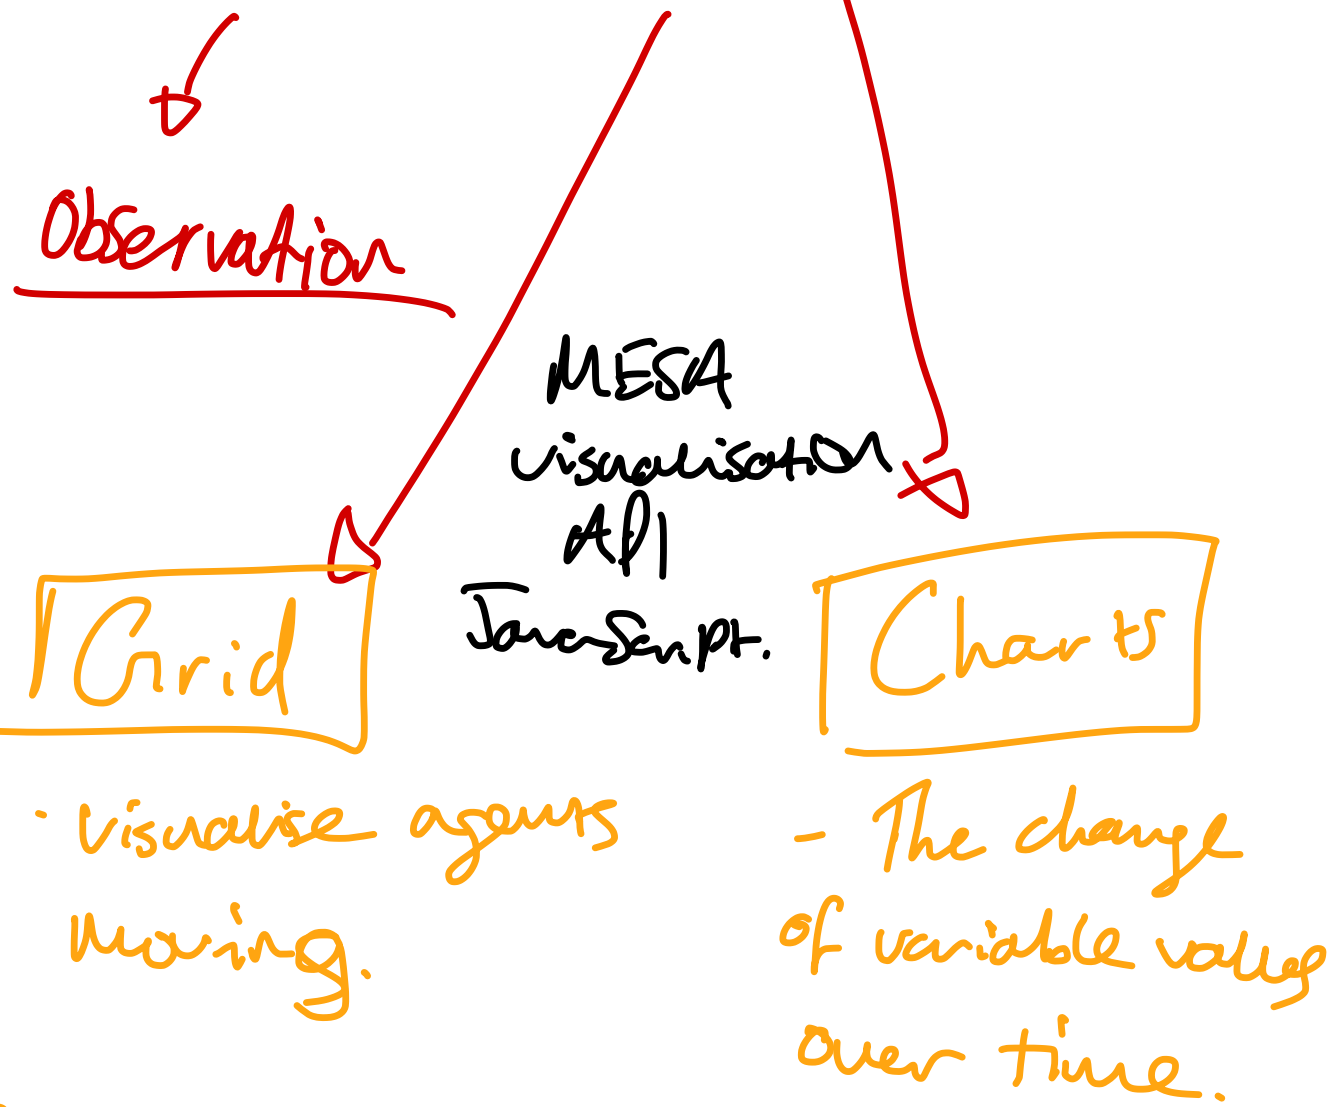

↑
Running the model over time with different input parameters.

`mesa.batchrunner`

- BatchRunner
(class)

↓
implemented in
main.py.
requires:
- parameters

MESA visualisation

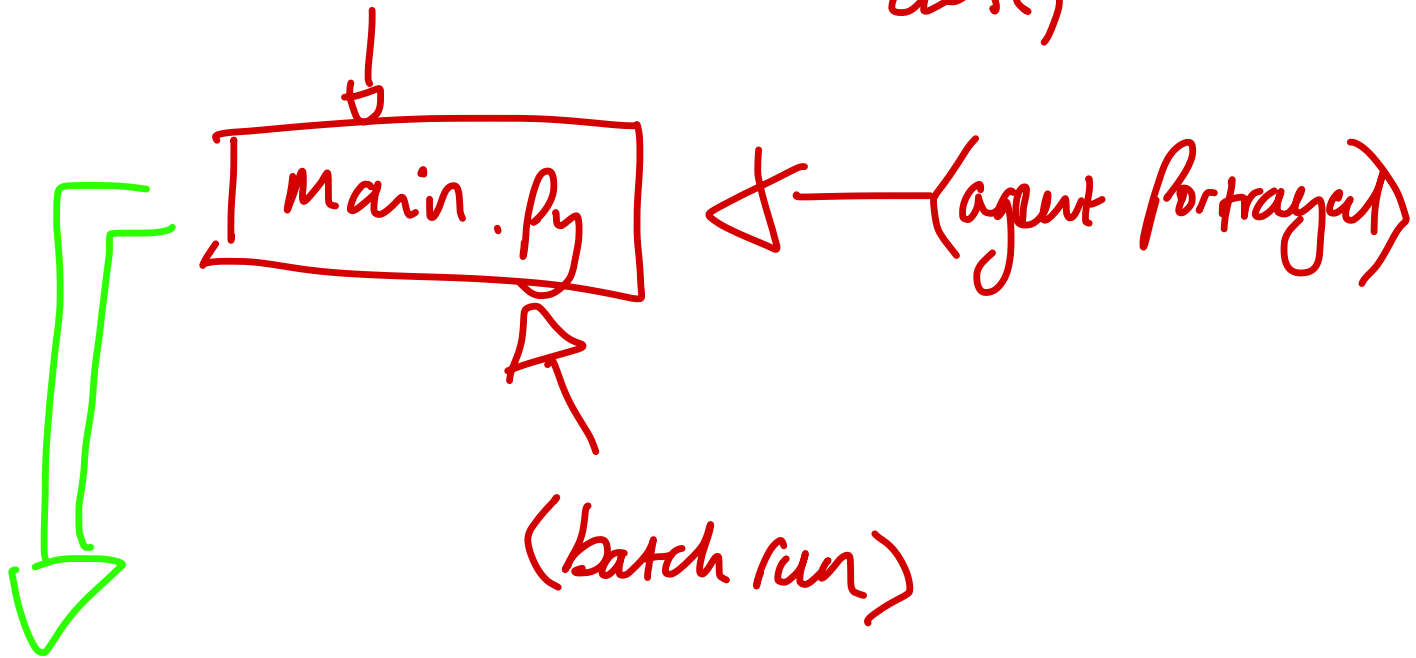

Classes

- `mesa.visualization.modules` import `CanvasGrid`
- `mesa.visualization.modularVisualization` import `ModularServer`.

Skeleton Model (abstract class)

Simulation + output.

GOAL

- Urban observatory data
 - ↳ model (MESA)
 - ↳ Simulation.
